

FACTS

OFFECCT

PRODUCT INFORMATION

The chair Cape by Japanese design studio Nendo was presented as an experiment in Offecct Lab 2013 but is from 2014 a part of the Offecct collection.

"This chair was created by covering a strong, light metal pipe frame with a wooden seat and a wooden back attached together equal to a cover. We named this chair Cape because of the way the wood is casually tossed over the frame like a cape, rather than enclosed like a coat or a jacket", says Oki Sato at Nendo.

TECHNICAL INFORMATION
